

Xavier Saliniere

Senior Full-Stack Web Developer

Senior Full-Stack Developer with 10+ years of experience in enterprise applications covering security, operations, and analytics domains. At Bell Canada's Operations Center, I built and maintained multiple platforms accelerating operational efficiency and decision-making, including security applications for WAF management, vulnerability tracking, phishing detection, and incident response. I am motivated by creating tools that help people make better decisions, faster. Aspiring to transition into cybersecurity and penetration testing.

📍 Geneve/Zurich/Lausanne, Switzerland

Work Senior Full-Stack Developer

Bell Canada

Jan 2022 – Present

Full-stack development for Bell Canada's Operations Center, building enterprise security and analytics platforms.

- Developed Insights Platform — AI-powered customer support analytics platform used by 1,100+ users
- Built WAF Management Platform — Web Application Firewall policy configuration with side-by-side comparison, virtual server management, and real-time monitoring through telemetry integration
- Created Vulnerability Management platform — Tracking and remediation platform for security vulnerabilities across Bell infrastructure
- Implemented EDR platform — Event Detection and Response platform for real-time security incident coordination
- Built Phisherman — Phishing detection and analysis platform integrating threat intelligence for proactive defense
- Developed SLURP — Asset management system with barcode tracking and application status monitoring

- Created UCDB — Unified Configuration Database platform with API documentation and field management

Senior Full-Stack Developer

Talan

Jan 2022 – Present

Contracting firm. I was assigned to Bell Canada.

Lead Front-End Developer

onepoint

Sep 2019 – Jan 2022

Contracting firm. I was assigned to Renault Digital.

Lead Front-End Web Developer

Renault Digital

Sep 2019 – Jan 2022

Led frontend development for PRISM — modular web application for automotive component definition and validation.

- Built modular architecture enabling different stakeholders (designers, engineers, procurement teams, compliance specialists) to view and validate components according to their specific needs
- Established coding standards, architectural decisions, and team development practices
- Reduced component validation time and resolved conflicts earlier in the design phase

Full-Stack Developer

Yanport

Jan 2016 – Sep 2019

Full-stack development of web applications and services providing tools for real estate professionals.

- Built platform aggregating property listings from multiple sources with advanced search, filtering, report generation, and proposal creation
- Completed AngularJS to Angular 5 migration implementing Progressive Web App capabilities and responsive design for mobile and tablet
- Developed backend systems with real-time data updates, search optimization, and crawling infrastructure

Education

Lycée Le Rebours — Paris 13°

Licence STS in Computer Science

Jan 2016 – Jan 2017

Lycée Léonard de Vinci de Melun

Projects [site](#)

Personal website and digital presence.

- Self-hosted website deployed via IPFS and IPNS
- Automated CI/CD pipeline with GitHub Actions

TypeScript IPFS IPNS Self-hosted

Isd

A shadcn-based implementation of the Logos Design System.

- Component library built on shadcn/ui patterns
- Logos Design System implementation

TypeScript React shadcn Design System

AnyMaps

Offline navigation with decentralized, privacy-preserving messaging and social layers.

Rust Decentralized Privacy Mapping Offline

logos-storage-nim-bin

Pre-built static libraries enabling simple integration of Logos Storage into other projects.

Python Logos Storage Build Tools

AnyNode

Rust-based node serving AnyMaps navigation data in a decentralized manner.

Rust PMTiles Logos Decentralized

storage-rust-bindings

Rust bindings for Logos Storage, providing native Rust integration.

Rust FFI Logos Storage

localitysrv

Tor hidden service providing privacy-first access to PMTiles navigation data.

Rust PMTiles Tor Privacy

Ash

Hackathon project for P2P field coordination supporting activism and protest movements.

- Peer-to-peer coordination between users without centralized infrastructure
- Censorship-resistant communication

TypeScript

P2P

Activism

Hackathon

localitysrv-waku

Waku integration for localitysrv enabling P2P distribution of navigation data.

- Waku protocol integration
- Decentralized data distribution

TypeScript

Waku

P2P

Decentralized

Ethos

Web crawler and API for aggregating and serving digital rights organizations' publications.
